

Botanical name:
Genus: Haworthia
Species: fasciata

Common Name(s): Zebra cactus

Latin Family Name:
Asphodeloideae
English Family Name:?

The plant

Origin; country or region: Native to Southern Africa

Growth habit: Small succulent plants, forming rosettes of leaves

Flower description: Their flowers are small, and generally white

Blooming period/availability:

Leaf/Foliage Description: Firm opaque, linear, rosette leaves with green and cream markings. Trim and neat in appearance with firm leaves

Usage: Delightful little succulents that make attractive small houseplants

STRENGTHS/OPPORTUNITIES:

One of the easiest houseplants to care for

Super architectural structure- typical solitary columns which form in layers

Used for texture in plant arrangements/floral design

(tape onto woodenpick/stick)

Good for terrariums

Easy starter plant o have

WEAKNESS:

Sensitive to water and light

* Not on EMC list, Local botanical

Care & Handling

Longevity: 3-5 years

Water requirements:

Water sparingly

Keep plant moist, do not let it dry out

Light: Bright light

Soil/Nutrition requirements: Use cactus potting mix

Special care/remarks:

A common Haworthia is characterized by its rosette-shaped, tightly packed leafy clusters. Some are firm, tough, and dark green, whereas other species are softer and even translucent. Those of the firm, dark green variety are typically dotted with white spots and can turn a rich hue of purple-red when exposed to full sun
